CAFETERIA MANAGEMENT SYSTEM

A database management system to organize the orders by customers in a cafeteria.

Apart from managing all the aspects of taking orders from customers and generating their bills, we also manage the updates in the menu.

Entities and attributes:

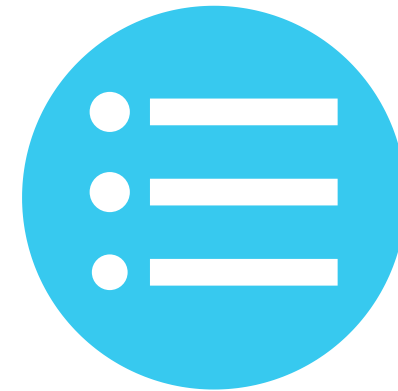

Customer

- Customer Name.
- Customer ID.

Items

- Price
- Item Number.
- Quantity.

Orders

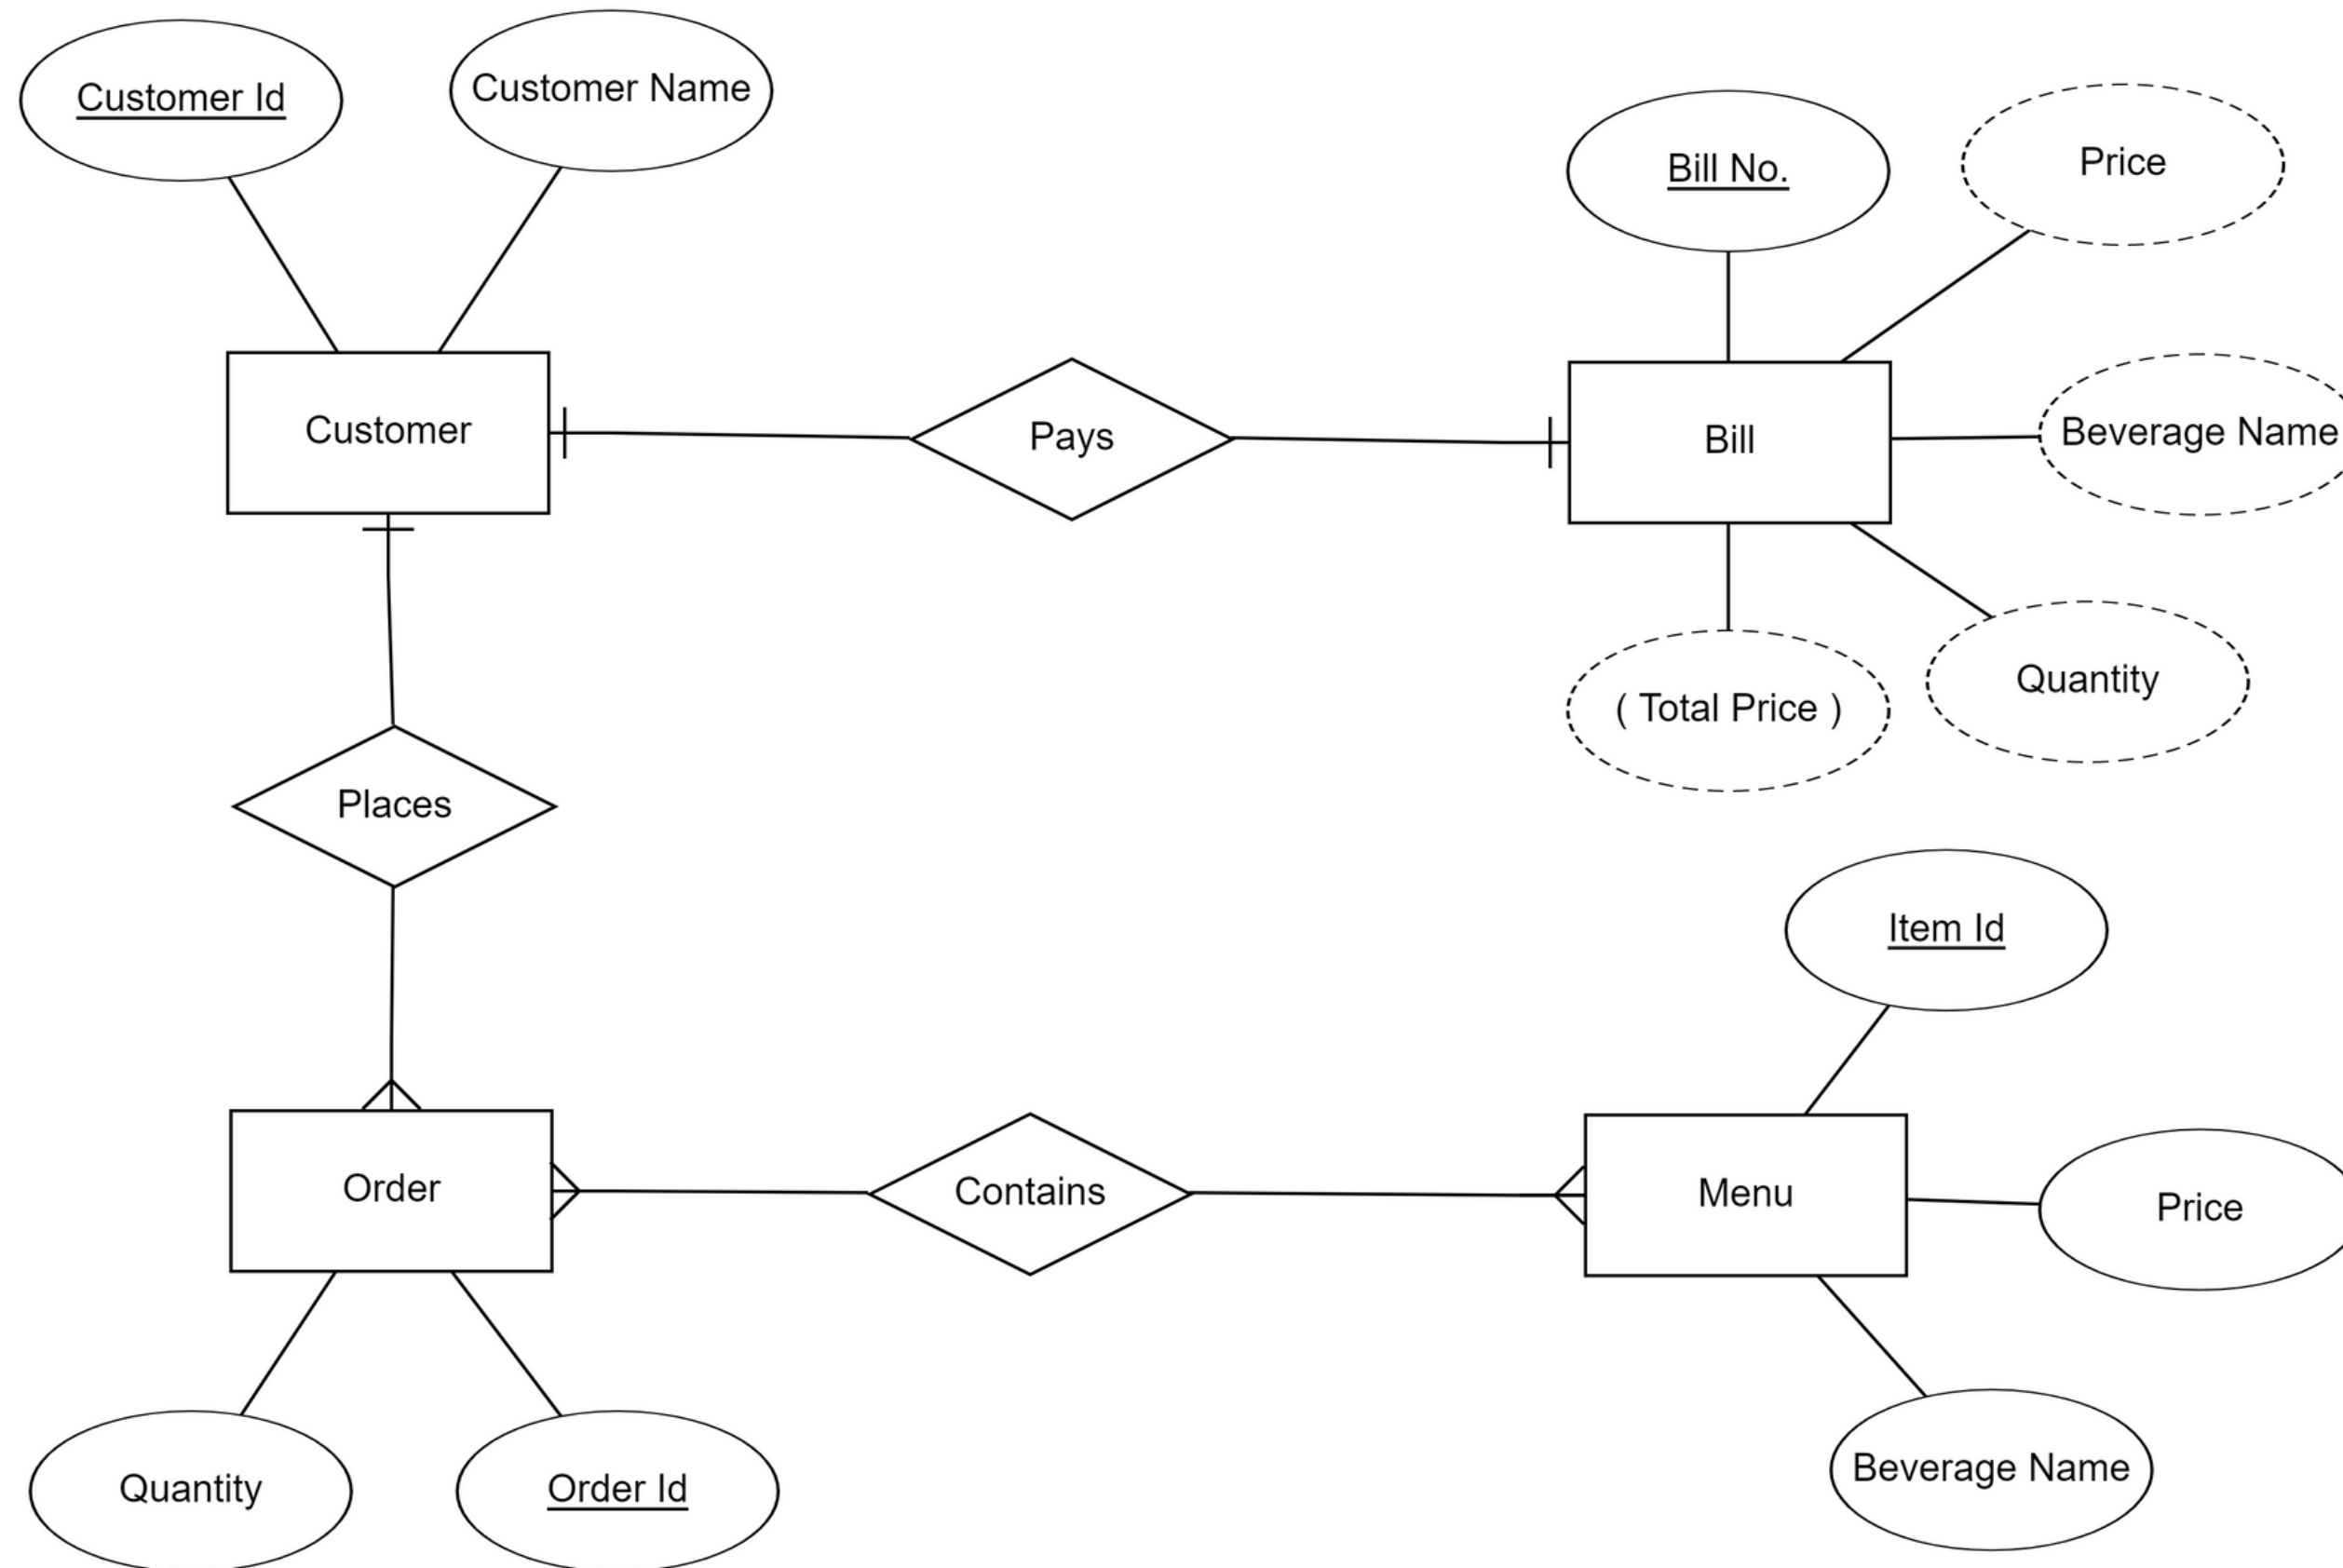

- Order Number
- Number of items.

Bill

- Bill Number.
- Price.
- Order Details.

ER Diagram:

Flow of the project:

Order Creation

- Enqueue order
- Dequeue order
- Bill generation

View Menu
